

INNOVATIVE TREATMENTS FOR TARGETED DISEASES

A MESSAGE FROM THE CEO

We had an extremely successful 2017 with highlights that include achieving new research milestones, developing new strategic relationships, adding renowned industry leaders to the team, and much more.

The Company spent much of the year advancing its cannabinoid-derived pharmaceutical drug pipeline with target indications including pain management, anxiety and mood disorders, and dermatology. Expansions to corporate offices in Vancouver and research labs in Burnaby, B.C. allowed us to advance our in-house molecular research. Adding key personnel to our renowned Scientific R&D team and Advisory Board also allowed us to deliver on strategic initiatives that furthered our research.

The Company looks forward to 2018 as we advance our agenda in becoming leaders in endocannabinoid system-based prescription medications and significantly improving the quality of patients' lives through development of safe and effective cannabinoid-derived therapeutics.

- Boris Weiss, CEO

RECENT NEWS

OUR NEW LAB FACILITY

Medipure recently opened their new research center in Burnaby, B.C. The new lab facility is aimed at supporting the Company's research and development of cannabinoid-derived molecules into non-addictive pharmaceutical drugs. This new facility will be expanded this coming summer with further space being built out for additional molecular research accompanied by a GMP facility for early-stage drug production. This new GMP facility will be manufacturing the highest standard of drugs for the various phases of our clinical trials.
